

# CITY OF CONCORD

## REPORT TO THE MAYOR AND CITY COUNCIL

**FROM:** Edward L. Roberge, PE, City Engineer

**DATE:** December 20, 2016

**SUBJECT:** Request from the US Geological Survey (USGS) to license the installation of a groundwater replacement well on city property at the Concord Municipal Airport.

### **Recommendation**

Accept this report recommending that the City Council license the installation of a replacement well at the airport.

### **Background**

On November 12, 2016 Richard Kiah, Chief of Hydrologic Network Operations with the USGS forwarded a communication to the Engineering Services Division requesting a license to replace an existing groundwater monitoring well at the municipal airport.

### **Discussion**

The USGS installed a monitoring well at the Concord Airport in 1963 to assist with groundwater data collection state wide. The existing well is located 100 feet north of the terminal building and will be replaced at a location just east of the existing well outside of the perimeter fence. This will allow access to the well without entering the secured area of the airport.

Therefore, it is recommended that City Council grant licensure for the installation of the well to be located on city property at the airport.
