DESCRIPTION:	The purpose of the	nis project	is to fund routine re	pair and rec	onstruction of City st	reets, incl	uding minor alteration	ns to improve	e safety and flow of traffic.	
	There are generally two techniques used to improve streets; cold planing and reclaiming. Cold planing and overlaying involves removal of the top 1-2" of existing pavement with a milling machine, followed by the installation of new pavement. Reclaiming involves in-place crushing and recycling of all underlying asphalt and gravel road base, which is then graded and compacted to form the foundation for new pavement.  All streets scheduled for cold plane / overlay or reclamation receive drainage improvements, as might be required to correct existing deficiencies in order to prolong longevity of the roadway.  Crack sealing is also included within this project in order to prolong the longevity of past paving projects.									erlying
SERVICE IMPACT:	Improved roadway surfaces and drainage infrastructure. Reduced maintenance. Improved drivability / rideability for motorists.									
IMPACT IF NOT FUNDED:	Deferred maintenance results in increased deterioration of roadway infrastructure, thus necessitating more involved and expensive repairs in the future.
